

Problem Solving With Computational Thinking

Session-3

CLARUSWAY©
WAY TO REINVENT YOURSELF

IF - ELSE IF - ELSE

This keyword is used if a certain condition has to be met for the upcoming block to be executed. For example:

```
IF you are happy      If you are tired
    Then smile        Then rest
                        else if you are stressed
                        Then relax
ENDIF                 else
                       Keep working
```

As you can see we also use indentation in order to declare that "smile" is being executed **inside** the if statement above it.

WAY TO REINVENT YOURSELF

IF - ELSE IF - ELSE

This keyword is used if a certain condition has to be met for the upcoming block to be executed. For example:

```
IF you are happy
    Then smile
ENDIF

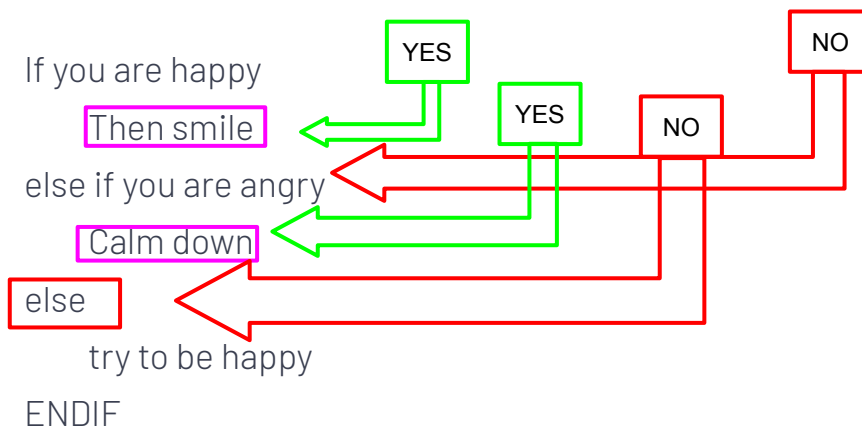

If you are tired
    Then rest
else if you are stressed
    Then relax
else
    Keep working
```

As you can see we also use indentation in order to declare that "smile" is being executed **inside** the if statement above it.

IF - ELSE IF - ELSE

This keyword is used if a certain condition has to be met for the upcoming block to be executed. For example:

▶ IF - ELSE IF - ELSE

```
Begin
INPUT hours, rate
IF hours < 40
THEN
    pay = hours * rate
ELSE
    pay = 40 * rate + (hours - 40) * rate * 1.5
OUTPUT pay
End
```

▶ FOR structure

For loop runs for each element inside a group. For example:

```
For every day of the week
    Count;
endfor
```

FOR structure

For loop runs for each element inside a group.

For example:

For every 25 minutes of study

Earn one Pomodoro;

Pomodoro = Pomodoro +1

endfor

WHILE Structure

While is similar to the for loop, differently it runs the loop until the condition provided is **unsatisfied**. Example:

Apples = 5

Oranges = 10

While apples < oranges

increase apples;

endwhile

Exercise

Write a pseudocode that takes a number as an input and prints true if it is greater than 10 and false otherwise.

Students, write your response!

Flowcharts

Problem Resolution Flowchart

Flowcharts

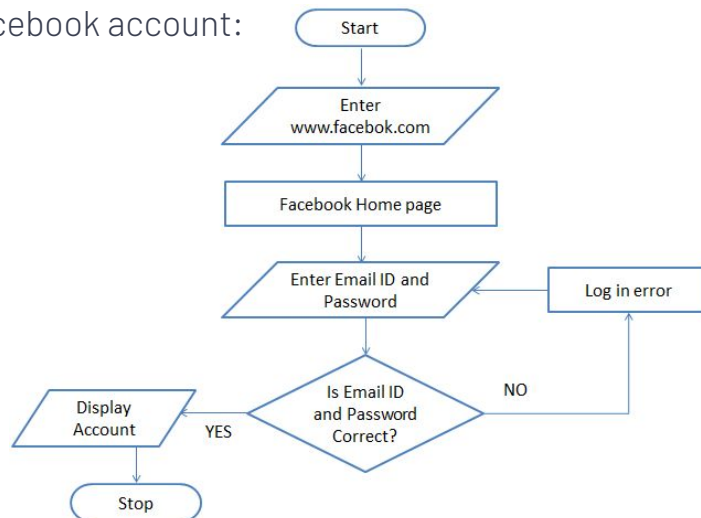

- A flowchart is a diagram that represents a sequence of instructions.
- Flowcharts have standard symbols to represent different instructions.

Name	Symbol	Usage
Start or Stop		The beginning and end points in the sequence.
Process		An instruction or a command.
Decision		A decision, either yes or no.
Input or Output		An input is data received by a computer. An output is a signal or data sent from a computer.
Connector		A jump from one point in the sequence to another.
Direction of flow		Connects the symbols. The arrow shows the direction of flow of instructions.

Login Diagram

A flowchart to login to facebook account:

► Brew Turkish Tea

Let's draw a flowchart of steps to brew Turkish tea using gitmind flowchart drawing feature!

► Showtime

Show your masterpiece

Exercise

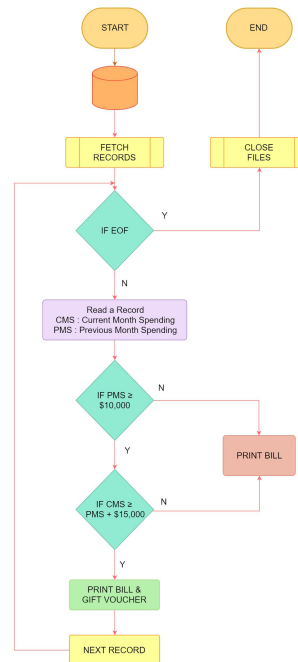

Bank of America has launched a promotion for its credit card customers. According to the promotion, the customers will receive a gift voucher worth \$500 with their monthly bill if they spend \$15,000 more than their last month spending and their last month bill is not less than \$10,000.

Solution

Draw the flowchart of the promotion

THANKS!
